Bloom undergraduate rubric — evidence crosswalk

Reviewed October 26, 2026 against all supplied course pages in docs/requirements/. This maps evidence; it does not assign grades, promise credit, or replace each student's live explanation.

Undergraduate base categories

Category / maximum	Available evidence	Remaining requirement / limitation
Functionality & applied knowledge / 25	Five routed screen roles, validated forms, lists, gestures, dialogs, activity lifecycle, filters/aggregates; real SQLite/helper integration. TEST_LOG.md: 33 host tests; two real-plugin tests per AVD; release checks on two distinct emulator profiles. AI_FEATURE.md gives five case types with expected/actual outcomes, baseline, metric/sample size and limitations.	Both students must explain actual app behavior, state changes and error recovery in the recording. Two AVDs use one Android 17 image; no physical/older-OS claim.
Code quality & core concepts / 15	Stateless presentation cards/garden and Stateful forms/activity; gateway, repository, settings and pure helper separated. Controllers/repository disposed; async mounted checks/retry; ARCHITECTURE.md explains ownership and boundaries.	Each student must demonstrate understanding of their actual contribution; AI-generated text/code is not itself proof of learning.
UI/UX, creativity & engagement / 15	Supplied sage/cream design implemented; accessible labels/counts, scalable text, scrollable portrait/landscape, reduced motion, saved-progress garden and explicit helper Apply/Not now/Save. Actual screenshots plus source/log-supported iteration documented in DESIGN_ITERATION.pdf.	GAP: no real peer usability observation or peer-verified revision supplied. Concept-to-implementation comparison and automated keyboard/layout fixes are genuine technical evidence, not invented peer feedback. Full accessibility certification is not claimed.
Local data persistence / 15	Both entities' full validated CRUD, parameterized queries, SQL uniqueness/FK/cascade, refreshed summaries, transactional corrections and SharedPreferences. Actual release APK survives force-stop/relaunch offline with records and all settings on both AVDs.	Explain storage choices and target-edit/history trade-off in video. No cloud storage is used. No backup or older-Android behavior claim beyond executed checks.

Category / maximum	Available evidence	Remaining requirement / limitation
Version control, engagement & Kanban / 10	Actual author history, feature branches, PRs, agent-assisted technical review, each member's code/test trace and real build blocker. Partial Kanban_Contribution_Evidence.pdf is in repository root and ZIP. README links the exact file and supplied List reference.	GAP: history does not meet demonstrated 20 meaningful commits/member; no fabricated/padded/backdated history. Actual Board URL/member mapping/permissions, daily updates/WIP/Done policies, four dated captures, real task IDs/acceptance/activity/review transitions and dated flow sample remain unverified. Oct 17/20/23 captures not supplied; Oct 27 capture is due tomorrow. At least one completed actual board implementation task/member plus CRUD/helper/testing coverage and a recorded task-to-code/test trace are required.
Documentation & reflection / 10	README setup, versions, usage, schema, limitations/future plans/license status; ARCHITECTURE, report, AI_FEATURE, separate AI usage log, deck, test evidence and technical package. Authentic unsigned forms and reflection worksheet are prepared for humans.	GAP: finalized approved proposal evidence, real signatures, genuine contribution/peer evidence, actual video URL and students' own learning/reflection. An unsigned form or pending draft is not a completed deliverable.
Mandatory Project 1 Q&A / 10	Rules confirmed: 10–15 actual bank questions, at least two per category, including I1/I2/D1/D2/R4; questions-only Word document must be uploaded before recording and included in final package. Planned 23-minute speaker split includes actual app/VS Code and collaboration trace.	Full bank is now supplied. Bloom_Project1_SelectedQuestions.docx is prepared with the 10 verbatim questions I1/I2, A1/A2, D1/D2, T1/T2, R1/R4. Selection upload before recording and genuine recorded answers remain human actions. Each member must explain contribution, state/data, helper evaluation and a real challenge/solution.

Base maximum is 100; optional bonus maximum is 15. No score or automatic stacking of deductions is calculated. The actual rubric lists substantial deductions for absent video/Q&A, collaboration and documentation; only the instructor determines applicability and grading.

Required ClickUp delivery checks

Delivery gate	Status
PDF in repository and every final ZIP	Placement corrected: repository-root Kanban_Contribution_Evidence.pdf, also at ZIP root. Content is explicitly PARTIAL; no real board snapshots were supplied.
README Board URL and exact file path	PDF path linked. Supplied URL is a List reference; actual Board URL and shared permissions are not verified.

Delivery gate	Status
Privacy and usable offline evidence	Existing PDF omits tokens/passwords and shows actual code/author trace offline. Real board screenshots/permissions still need checking without hiding task ownership.
One recorded task -> owner/criteria -> commit/PR -> code -> test/review trace	Runbook/deck reserve time inside the same 20–25 minute presentation; actual board task/recording still missing. No second video or extra time is substituted.

Board expectations: Free Forever shared List + Board view, all members invited, Backlog/Ready/In progress/Review-test/Done; WIP one active task/member and two review/test tasks/team. Done requires acceptance criteria plus linked actual review/test evidence. Substitution with GitHub Projects requires instructor approval; none is claimed. Do not integrate ClickUp into the Flutter runtime.

Package and upload gates

Required artifact / action	Current state
README.md, ARCHITECTURE.md, PROJECT_REPORT.pdf	Present; updated against supplied rubric.
app-release.apk	Actual verified installed release-mode build, debug-key coursework signing disclosed. Hash in TEST_LOG.md.
AI_FEATURE.md and AI_Usage_Log.md	Present; rules helper is base work, separate assistance disclosure retained.
Kanban_Contribution_Evidence.pdf	Present in repo/ZIP, but content incomplete until genuine board/flow evidence is supplied.
Project1_Presentation.pptx	Present with planned 23-minute notes. Not a recording.
Approved_Proposal.docx	No instructor-approved finalized copy supplied. Verbal approval is user-reported; original pending draft is labeled separately.
Signed statement	Genuine signed PDF OR readable signed PNG/JPG (including continuation pages) is accepted. Current forms are unsigned only.
TeamName_Project1_SelectedQuestions.docx	Prepared from the actual bank with full text and no answers; working Bloom prefix may be adjusted to actual team name. Upload before recording.
GitHub_Repository_Link.txt	Present. Repo is private: instructor must be added as collaborator or repository made public by authorized team action. Instructor access is unverified; do not change privacy silently.
YouTube_Video_Link.txt and actual 20–25 minute team recording	Missing. Aim for rehearsed 23 minutes, with actual app, VS Code, both members and integrated answers/ClickUp trace.

Required artifact / action	Current state
Project_Group[Number]_Bloom.zip	Verified roster UG-P03 (Group 03); final name Project_Group03_Bloom.zip. Source/tests also remain in the repo and source archive.
Individual uploads	Rohan and Het each upload to iCollege by October 27, 2026, 11:59 PM Eastern and retain actual receipts. No upload performed here.

Individual reflection / peer evidence

The rubric assesses each student's actual understanding, meeting/Kanban decisions, peer evaluation, contribution and one challenge/solution/feedback change. No standalone personal reflection filename is specified in these excerpts, so none is invented as an extra mandatory file. human_input/INDIVIDUAL_REFLECTION_WORKSHEET.docx is a preparation aid only; students must supply their own truthful responses.

The physical-device suggestion is a final tip; the explicit base requirement is two distinct devices/emulators. Graduate-only Provider/Riverpod/BLoC, background processing, notifications, file operations and coverage quotas are not undergraduate obligations. No optional bonus work is added at the expense of submission readiness.
